innodisk

DRAM Module Testing Process

| Problem Replication | Once the returned products are received, Innodisk will replicate the problems based on the customer's product implementation environment and platform. |

▼

Appearance Inspection	
SPD Verification	The returned products will be examined through various tests, and the subsequent repairs will be carried out based on the assessment findings.
Electrical Test	

▼

| Repair | After repair, Innodisk will test the module through MemTest and iRAM to ensure product functionality, with follow-up inspection if needed. |

▼

| DRAM Functional Test (MemTest & iRAM) | |

▼

| Test Report | Innodisk will complete the RMA process around 7 to 10 working days after receiving the product and will provide a complete test report. |
